

1008 PRISMATIC REFLECTORS

This section covers the material requirements for reflectors used on delineators, markers, and letters, symbols, etc. on signs.

When used in arrays, such as for letters or numbers on a sign, all the reflectors are to be from the same manufacturer. Reflectors from different sources that vary in brightness or color and do not present a uniform appearance are not acceptable. The use of reflectors in delineators and markers is discussed in Specification 703.

The prismatic reflectors in button-copy signs should be attached to the frame of the letter.
